*) Each activity will have three time estimation:

- optimistic
- most likely
- pessimistic

- a) Construct the network
- b) Find Expected Duration & Variance of Each Activity
- c) Find the Critical path & Expected completion time of project
- d) What is the probability of completing the project or before 22 weeks.

Solⁿ

a) Expected duration / Min duration & Variance.

$$t_e = \frac{0 + 4M + P}{6}$$

$$\text{for A} = \frac{5 + (4 \times 6) + 7}{6} = 6 \quad \checkmark$$

$$b) \text{ Variance } \sigma^2 = \left[\frac{P - O}{6} \right]^2$$

$$\text{for A} = \left[\frac{7 - 5}{6} \right]^2 = \left[\frac{2}{6} \right]^2 = \frac{4}{36} = 0.11$$

$$\text{for B} = \left[\frac{5 - 1}{6} \right]^2 = \left[\frac{4}{6} \right]^2 = \frac{16}{36} = 0.44$$

c) critical path & Expected complⁿ time.

Use critical path method (CPM)

1 → 4 → 6 → 7 → 8.

d) Activity: t_e σ^2

$$P(x \leq 22)$$

$$= P \left[\frac{x - \min(t_e)}{\sigma} \right]$$

=

$$\sigma = \sqrt{4.77} = 2.1840 \approx 2.19$$

~~PF 22-17~~

$$P \left[\frac{22-17}{2.19} \right] = \frac{5}{2.19} = 2.28$$

... ..

$$q + M A + 0 = 0$$

$$f + (2 \times 1) + 0 = 0$$

$$\left[\frac{0-9}{2} \right] = -4.5$$

$$11.0 = \frac{P}{2.5} \left[\frac{5}{2} \right] = 2.5$$

$$P \cdot 0 = \frac{21}{2.5} \left[\frac{1}{2} \right] = \left[\frac{2.1}{2.5} \right] = 0.84$$
